

JANUARY 16, 1957

Important Notice to Farmers!

Although the initial enrollment period for the 1957 Agricultural Convention Program has closed, most county A.S.C. offices are still accepting requests for practices under the 1957 A.C.P. In those areas where spring seeding of pastures are made and where grasses and legumes are included in the spring in small grain, those farmers who have need for it are eligible for the permanent vegetative cover practice designated as A-2 or additional rotation cover practice designated

as A-3 and should file requests with the county committee as soon as possible.

 To Texas, Ohio, Kansas and Neb., add 9¢ per lb. to postpaid prices.

POSTAGE DOES NOT INCLUDE EXPRESS OR FREIGHT CHARGES

Wood's Hybrid Corns

NOTED FOR GRAIN QUALITY

Realizing that corn is sold on a graded basis, quality has always been uppermost in our breeding objectives.

We started drying and processing corn in early September to assure you the best quality grade possible.

Our Hybrids are well graded, treated and packaged in cotton Ratcat treated bags. Germination is double checked.

WOOD'S V-26Y EXTRA EARLY YELLOW DENT

110 days. Roasting ears in 72 days. A better shuck than most early corns. Very good grain quality, standability and ear placement. Almost no broken stalks if harvested at 15% moisture. Very good seedling vigor, strong roots; in our tests has consistently surpassed Ohio C-54. Popular in the deep South for early hogging off.

T. W. Wood & Sons have been using the farm of Ben C. Mayo, Tarboro, N. C., as breeding and testing grounds for hybrid corn since 1945.

He started planting V-26Y on a small basis, but due to its outstanding performance, dry weather or wet; early vigor; standability; grain quality; earliness in drying, and ease in handling mechanically, he now plants practically his entire crop in this variety.

WOOD'S V-125W WHITE DENT

118 days. Roasting ears 78 days. **Best early milling corn.** New corn brings big premium in late summer. Dark green, vigorous plants, grow off fast, mature and dry quickly. Low sturdy stalk. Is used extensively by commercial growers in the deep South, where artificial drying of corn is used. High yielding, excellent roasting ear type, good grain quality.

Recommended in Coastal Plain and Southern Piedmont section of Va., and as a short season corn in Northern Coastal Plain of N. C.

WOOD'S S-352 WHITE PROLIFIC

130 days. **Our best pure white milling corn in the cotton belt**, similar to Dixie 17, other than our records show that it has better standing ability, approximately the same yielding ability, better shuck protection and about the same maturity.

HYBRID TRUCKER'S FAVORITE

110 days. **Best early garden corn** for the South, tender, delicious roasting ears in 76 days. Large, attractive, uniform ears. **Earliest white milling corn** brings a premium for the fine quality meal.

HYBRID SWEEPSTAKES ENSILAGE

Silage 109 days. Fast vigorous growth. Makes more combined silage, grain, protein and feeding value per acre than other silage corns of similar maturity.

WOOD'S V-51A YELLOW DENT

125 days. Farmers and commercial growers prefer V-51A because of the exceptionally high yields, high grain quality, medium size plants, good ear placement, earliness in drying, drying down to where it is safe to crib or artificially dry while the stalks are still green enough to prevent excess breakage and easiness to handle mechanically.

V-51A is used more and more as a full season corn in eastern Va., and in eastern N. C. by commercial corn growers; outside of the rice weevil areas in the piedmont and western part of N. C., S. C., and Ga., as a main crop cribbing corn.

WOOD'S V-50 or V-50A YELLOW DENT

125 days. Bumper crops of sound, nutritious yellow feed corn. Very similar to V-51A.

WOOD'S S-210 GOLDEN PROLIFIC

130 days. **Our best early feed or hogging corn for the deep South.** A fine main crop corn in the Piedmont. Big beautiful sound ears with deep, flinty, golden grain. High feed value. Good shuck and withstands heat, drought, storms and disease. Grows off fast, matures early, dries quickly. We also recommend it for South Central and Eastern Va.

On recommended list of Piedmont Ga.

WOOD'S S-211 GOLDEN PROLIFIC

134 days. **For bumper crops of nutritious feed corn in cotton belt.** Better quality grain, flintiness, shuck, weevil, drought and disease resistance, stands up better than most hybrids. Recommended in Southern Coastal Plain of N. C.

WOOD'S V-44 EARLY YELLOW DENT

117 days. Superior for Piedmont and Mountains, or in the South for hogging or early harvest to sell when feed corn is short and high.

WOOD'S V-42 EARLY YELLOW DENT

115 days. Similar to V-51A. It is early, dries quickly and easy to harvest.

WOOD'S V-30 EXTRA EARLY YELLOW

112 days. Similar in many respects to V-26Y, with a few days of earliness sacrificed.

WOOD'S S-240 YELLOW FLINTY

138 days. **Our most weevil resistant, heaviest yielding yellow cribbing corn** in the Southern Coastal area.

Planting Information

ALFALFA—Inoculate and sow April, August or September on firm seedbed; cover $\frac{1}{4}$ inch; cultipack or drag; 25 lbs. per acre, or 20 lbs. with 5 lbs. orchard grass for hay. Add 5 lbs. to every pasture mixture.

SWEET SUDAN, Extra Fancy, Free of Johnson Grass—Quick summer pasture or hay crop, resists drought and heat. Sow 20 to 35 lbs. per acre, drilled, or 10-15 lbs. in cultivated rows. $\frac{1}{2}$ to $\frac{3}{4}$ inches deep, on any well drained soil, after it gets warm. Can sow up to August 15.

ORCHARD GRASS—Extra Fancy, Onion Free Seed. Best long-lived, deep rooted grass for year 'round pasture or hay mixtures, or to reseed on old alfalfa sod. Sow 15 lbs. per acre in early spring or fall, 8 to 10 lbs. in mixtures with 1 to 2 lbs. Ladino.

KENTUCKY 31 FESCUE—Seed in early spring or fall on a well prepared, firm seed bed. Cover lightly, $\frac{1}{2}$ to $\frac{3}{4}$ inches. Sow 15 lbs. per acre alone, or 8-10 lbs. with 1 lb. Ladino, 1 lb. Dixie White Clover, 5 lbs. Red Clover, and 8 lbs. Alfalfa on good soils, or with 15 lbs. Lespedeza on poorer soils.

CERTIFIED LADINO CLOVER—The most nutritious, palatable and productive year 'round pasture legume. May cause bloat unless grasses are grown with it. Sow 2 lbs. of Ladino Clover with 12 lbs. of Ky. 31 Fescue, or 8 lbs. of Fescue with 4 lbs. of Orchard Grass in early spring or fall. Add 2 lbs. of Red Clover and 5 lbs. of Alfalfa for more summer pasture.

WHITE DUTCH CLOVER—For Lawns or Permanent Pasture. Same adaptation, growth, habits and seeding requirements as Ladino, but does not grow as fast, requires less lime, phosphate and potash; does better in Ky. Bluegrass pastures or lawns. Sow 2 lbs. per acre; 1 lb. with Ladino in case it dies out.

ANNUAL LESPEDEZAS—Korean and Kobe. Sow 25 lbs. per acre alone, 10-20 lbs. in mixtures in Feb. or early March on small grain, or Feb. to June sown alone. Harrow grain lightly if land is crusted. Don't cover over $\frac{1}{4}$ inch. Do not cover if sown early in late freezes or on grain.

LESPEDEZA SERICEA—Perennial. For Hay, Pasture or Birds. Sow 30 to 35 lbs. unhulled seed in Jan. or Feb., or 20 lbs. scarified March to June. Cover very lightly. Leave off nitrogen and manure or crab grass and weeds will take it the first year. For hay the first year sow 20 lbs. Korean or Kobe with 15 to 20 lbs. scarified Sericea in March or April.

WOOD'S PERMANENT PASTURE MIXTURES—Grasses and clovers whose maximum growth is at different times thru-out the year for abundant nutritious year 'round grazing.

1. For light gravelly or sandy soil
2. For good loam or clay soil
3. For moist bottom land

WOOD'S PERMANENT HAY MIXTURES—Grasses and Clovers maturing together, making bumper hay crops, easily cured.

6. For light gravelly or sandy soil
7. For good loam or clay soil
8. For moist bottom land

WOOD'S SOUTHERN PERMANENT PASTURE AND HAY MIXTURE 12—Produces tremendous yields of the finest nutritious pasture and hay on both light and heavy soils in the Southern Coastal area from Virginia to the Gulf.

On the above Pasture and Hay Mixtures sow 25 lbs. per acre, in early spring or fall, not over $\frac{1}{4}$ to $\frac{1}{2}$ inch deep on a good firm seed bed, then cultipack. Treat seed with Arasan and Wood's Inoculation 2. Disk in about a ton of lime per acre and up to 1,000 lbs. of 2-12-12.

WOOD'S SEED OATS

High Germination, Doubly Cleaned, 99% Pure, New Bags, Ceresan Treated
Drill $2\frac{1}{2}$ to 3 bu. per acre for grain, 3 to 5 bu. for pasture In Jan. or Feb. sow winter varieties like Fulwood, Woodgrain, Lee and Fulgrain. March and April sow spring oats like Andrew and Columbia.

FULWOOD OATS—Outyielded all other oats on the recommended list in the Piedmont section of N. C. on a 4 year average. Was second highest yielding in the Coastal test. Also recommended in Va. for February planting. In eastern Va. for fall or spring planting. Have also done well in Fla. and Ga. They ripen uniformly, stand better on rich land, also under high fertility conditions than other varieties. One of the shortest strawed oats known. Can plant up to March 7th.

Also available, Lee Cold Proof Oats, Andrew Oats, and Columbia Oats.

WOODGRAIN OATS—Outyielded all other oats on the recommended list on a 4-year average in the official N. C. Coastal Plain test. Excellent in uniformity of ripening, standability, stooling and seed quality. Especially recommended for mid-winter planting in Va. also Carolinas. Can plant up to March 7th.

Wood's Quail Planting Mixture

Follow the advice of the Va. Game Commission, and plant the 15 to 30 ft. of field next to the woods in wildlife food. We have incorporated in our mixture 13 kinds of seed, including Bicolor and Sericea Lespedezas. How to Plant: Broadcast 25 lbs. per acre, May to July, on prepared land, using 400 lbs. of fertilizer. It pays to disc, harrow and sow each year. For Quail, sow in long strips near cover, fences, ditches, or hedgerows, in old tobacco beds, or in openings or fine lanes in woods. For a 15 by 400 ft. strip use 5 lbs. For Wild Turkeys or Pheasants sow in wider strips by secluded spots. For Doves, sow one or two acres in an open area.
